

Graphing Lines (Table Method)

1. Complete the table for $y = x + 3$.
 Plot the points and graph the line.

x	-5	0	4
y			

2. Complete the table for $y = 3x - 2$.
 Plot the points and graph the line.

x	-2	0	3
y			

3. Complete the table for $y = -2x + 6$.
 Plot the points and graph the line.

x	-1	0	3
y			

4. Complete the table for $y = \frac{1}{3}x - 5$.
 Plot the points and graph the line.

x	3	0	6
y			

For the following problems one value of x is chosen for you and **you will choose** two others.

5. Complete the table for $y = -3x + 5$.
Plot the points and graph the line.

x		0	
y			

7. Complete the table for $y = 2x + 2$.
Plot the points and graph the line.

x		0	
y			

6. Complete the table for $y = \frac{1}{2}x + 4$.
Plot the points and graph the line.

x		0	
y			

8. Complete the table for $y = -\frac{1}{5}x - 3$.
Plot the points and graph the line.

x		0	
y
