

## Systems of Equations (Mixed)

**Solving systems of equations** can be done a few ways such as **graphically**, **substitution** or **elimination**. Solve the following **systems of equations** using **any method** to find the solution. If you choose to graph a graph has been provided for you. Please use a ruler.

1.  $y = -2x + 5$   
 $3x - 2y = 4$

2.  $y = x - 5$   
 $y = -2x + 4$

3.  $3x - 4y = 12$   
 $5x + 4y = -12$

4.  $y = x + 1$   
 $2x - 5y = 4$

5.  $2x + 2y = 7$   
 $y = 4x + 1$
